

Attrib

Object

Processus

StorageFifoAcquisition

```
graph BT; A[StorageFifoAcquisition] --> B[Processus]; B --> C[Object]; C --> D[Attrib];
```

The diagram illustrates a four-level hierarchy. At the base is 'StorageFifoAcquisition', which points up to 'Processus'. 'Processus' points up to 'Object', which in turn points up to 'Attrib'. Each level is contained within a rectangular box, and the connections are represented by vertical arrows pointing upwards.
