Object

Processus

PhaserRampExec

```
graph BT; PhaserRampExec --> Processus; Processus --> Object; Object --> Attrib;
```

The diagram illustrates a vertical hierarchy with four levels. At the base is 'PhaserRampExec', which points up to 'Processus'. 'Processus' points up to 'Object', which in turn points up to 'Attrib' at the top. Each level is contained within a rectangular box, and the arrows indicate a directional flow from bottom to top.
